LAB REPORT
on

Artificial Intelligence (23CS5PCAIN)

Submitted by

V Tanusree (1BM22CS313)

in partial fulfillment for the award of the degree of
BACHELOR OF ENGINEERING
in
COMPUTER SCIENCE AND ENGINEERING

B.M.S. COLLEGE OF ENGINEERING
(Autonomous Institution under VTU)
BENGALURU-560019
Sep-2024 to Jan-2025

B.M.S. College of Engineering,

Bull Temple Road, Bangalore 560019

(Affiliated To Visvesvaraya Technological University, Belgaum)

Department of Computer Science and Engineering

CERTIFICATE

This is to certify that the Lab work entitled "Artificial Intelligence (23CS5PCAIN)" carried out by **V Tanusree (1BM22CS313),** who is bonafide student of **B.M.S. College of Engineering.** It is in partial fulfillment for the award of **Bachelor of Engineering in Computer Science and Engineering** of the Visvesvaraya Technological University, Belgaum. The Lab report has been approved as it satisfies the academic requirements in respect of an Artificial Intelligence (23CS5PCAIN) work prescribed for the said degree.

Prameetha Pai Assistant Professor Department of CSE, BMSCE	Dr. Kavitha Sooda Professor & HOD Department of CSE, BMSCE

Program 7

Implement unification in first order logic

Algorithm:

2/11 LAB-7

Unification Algorithm.

Step 1: If Ψ1 or Ψ2 is a variable or constant, then:

a) If Ψ1 or Ψ2 are identical, then return NIL

b) Else if Ψ1 is a variable,

a. then if Ψ1 occurs in Ψ2, then return FAILURE

b. else return {(Ψ2/Ψ1)}

c) Else is Ψ2 is a variable.

a. If Ψ2 occurs in Ψ1 then return FAILURE.

b. Else return {(Ψ1/Ψ2)}.

d) Else return FAILURE

Step 2: If the initial predicate symbol in Ψ1 and Ψ2 are not same, then return FAILURE

Step 3: If Ψ1 and Ψ2 have a different number of arguments, then return FAILURE

Step 4: Set Substitution set(SUBST) to NIL

Step 5: For i=1 to the no. of elements in Ψ1

a) Call Unify function with the ith element of Ψ1 and ith element of Ψ2 and put the result into S.

b) If S = failure the return failure

c) If S ≠ NIL then do,

a. Apply S to the remainder of both L1 and L2

b. SUBST = APPEND (S, SUBST)

Step 6: Return SUBST.

Code:

```
import re

def occurs_check(var, x):
    """Checks if var occurs in x (to prevent circular substitutions)."""
    if var == x:
        return True

        print("No more inferences can be made.")

# Run forward chaining to attempt to derive the conclusion
forward_chaining()
```

```
Inferred: Weapon(T1)
Inferred: Sells(Robert, T1, A)
Inferred: Hostile(A)
Inferred: Criminal(Robert)
Robert is a criminal!
```

Program 9

Create a knowledge base consisting of first order logic statements and prove the given query using Resolution

Algorithm:

20/12/24

Conjuctive Normal form (CNF).

Step 1: Eliminate implications and bidirectionals

$\alpha \rightarrow \beta$ is $\neg\alpha \vee \beta$

$\alpha \leftrightarrow \beta$ is $(\alpha \rightarrow \beta) \wedge (\beta \rightarrow \alpha)$

Step 2: Move negation inside

$\neg(\forall p) \Rightarrow \exists p$

$\neg(\exists p) \Rightarrow \forall p$

Step 3: Standardize variables.

$(\forall x)(\exists y) \quad (\forall x)(\exists y)$

$(\forall x)(\exists y) \quad (\forall A)(\exists B)$.

Step 4: Skolemize variable.

$\exists y\, f(y) \Rightarrow f(G_1)$.

Step 5: Drop universal quantifiers

$\forall y\, f(y) \Rightarrow f(y)$

Step 6: Distribute $\vee$ over $\wedge$

$(\alpha \wedge \beta) \vee (A \wedge B)$

$(\alpha \vee A) \wedge (\alpha \vee B) \wedge (\beta \vee A) \wedge (\beta \vee B)$

Resolution:

Step 1: ~~contradict~~ Convert the statements to CNF

Step 2: negate the statement that needs to be proved

Step 3: Repeat until there is contradiction or it is a failure:

→ Take 2 clause known as parent clauses and resolve

→ Unify the variables if needed.

Step 4: If unification is possible, It is proved by resolution.

Code:

```
# Define the knowledge base (KB)
KB = {
    "food(Apple)": True,
    "food(vegetables)": True,
    "eats(Anil, Peanuts)": True,
    "alive(Anil)": True,
    "likes(John, X)": "food(X)",  # Rule: John likes all food
    "food(X)": "eats(Y, X) and not killed(Y)",  # Rule: Anything eaten and not killed is food
    "eats(Harry, X)": "eats(Anil, X)",  # Rule: Harry eats what Anil eats
    "alive(X)": "not killed(X)",  # Rule: Alive implies not killed
    "not killed(X)": "alive(X)",  # Rule: Not killed implies alive
}

# Function to evaluate if a predicate is true based on the KB
def resolve(predicate):
    # If it's a direct fact in KB
```

```
    if predicate in KB and isinstance(KB[predicate], bool):

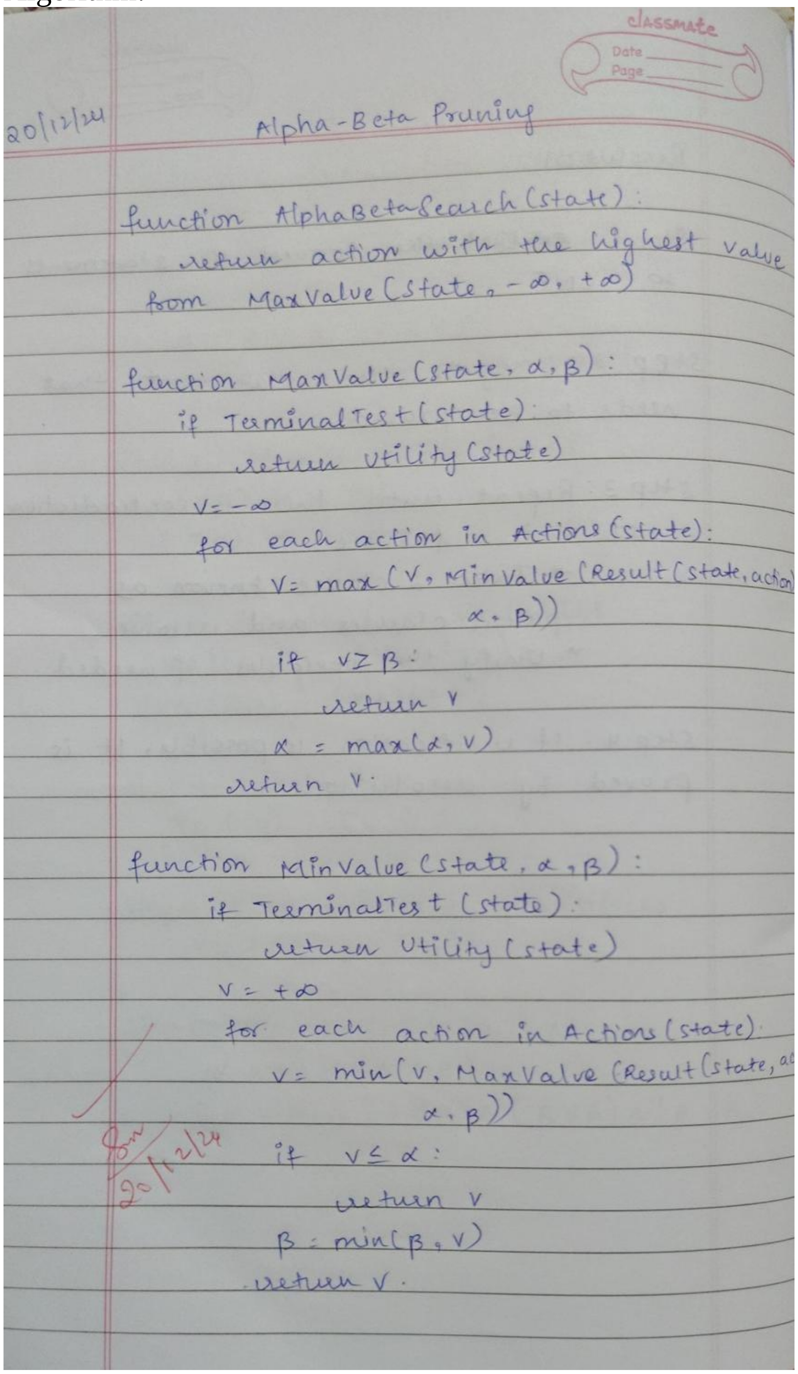
Does John like peanuts? Yes
```

Program 10

Implement Alpha-Beta Pruning

Algorithm:



20/12/24 Alpha-Beta Pruning

function AlphaBetaSearch(state):
return action with the highest value
from MaxValue(state, $-\infty$, $+\infty$)

function MaxValue(state, α, β):
if TerminalTest(state):
return Utility(state)
$v = -\infty$
for each action in Actions(state):
v = max(v, MinValue(Result(state, action), α, β))
if $v \geq \beta$:
return v
α = max(α, v)
return v.

function MinValue(state, α, β):
if TerminalTest(state):
return Utility(state)
$v = +\infty$
for each action in Actions(state):
v = min(v, MaxValue(Result(state, ac
α, β))
if $v \leq \alpha$:
return v
β = min(β, v)
return v.
